

SPECIFICATION SHEET

EG25 GEOGRID

EG 25 is a bi-axial polypropylene (PP) geogrid. Manufactured using a punching and drawing process, the polypropylene sheet is stretched in two directions, machine (longitudinal) and cross-machine (transverse). Engineered to be mechanically and chemically stable in aggressive soil environments, the EG geometry allows for strong mechanical interlock with soil particles and features high tensile stiffness at low strains to resist construction damage and environmental exposure and is formulated to resist UV degradation. It is also not susceptible to hydrolysis, environmental stress cracking, and micro-organism attacks.

⁽²⁾ Average

⁽³⁾ Junction efficiency is defined as junction strength divided by multi-rib strength

⁽⁴⁾ Resistance to in plane rotational movement measure at an applied moment = 2m-N (20kg-cm) in accordance with US Army Corps of Engineers methodology for the measurement of torsional rigidity

⁽⁵⁾ Aperture tolerance: within +/- 10% coefficient of variance
